Sciences

Date Type

- Date in Python is not a data type of its own
- We need import a module named “**datetime**” to work with dates as date objects.
 - More about modules and import will be in our next lecture

```
import datetime  
x = datetime.datetime.now()  
print(x)
```

2024-11-25 15:46:50.357335

Date

- The date contains year, month, day, hour, minute, second, and microsecond.
- The datetime module has many methods to return information about the date object.

```
import datetime  
x = datetime.datetime.now()  
print(x.year)
```

Creating Date Objects

- To create a date, we can use the `datetime()` class (constructor) of the `datetime` module.
- The `datetime()` class requires three parameters to create a date: year, month, day.

```
import datetime
x = datetime.datetime(2024, 11, 27)
print(x)
```

Date formatting

- The datetime object has a method for formatting date objects into readable strings.
- The method is called “strftime()”, and takes one parameter, format, to specify the format of the returned string

```
import datetime  
x = datetime.datetime(2018, 6, 1)  
print(x.strftime("%B"))
```

Date formatting

[Hunt 2019]

6

- Example of formats

Code	Example	Description
%a	Sun	Weekday as locale's abbreviated name.
%A	Sunday	Weekday as locale's full name.
%w	0	Weekday as a decimal number, where 0 is Sunday and 6 is Saturday.
%d	08	Day of the month as a zero-padded decimal number.
%-d	8	Day of the month as a decimal number. (Platform specific)
%b	Sep	Month as locale's abbreviated name.
%B	September	Month as locale's full name.
%m	09	Month as a zero-padded decimal number.
%-m	9	Month as a decimal number. (Platform specific)
%y	13	Year without century as a zero-padded decimal number.
%Y	2013	Year with century as a decimal number.
%H	07	Hour (24-hour clock) as a zero-padded decimal number.
%-H	7	Hour (24-hour clock) as a decimal number. (Platform specific)
%I	07	Hour (12-hour clock) as a zero-padded decimal number.
%-I	7	Hour (12-hour clock) as a decimal number. (Platform specific)
%p	AM	Locale's equivalent of either AM or PM.
%M	06	Minute as a zero-padded decimal number.
